

Personal Narrative

My map kind is a penguin map and they are on icebergs' made my map because I really like penguins, so then I knew that most penguins live on ice so I decided to draw something about penguins on ice. My pictures mean/stand for like the icebergs stand for a place to go to and the penguins stand for just extra to show how you would do what the words mean/are. My big ideas are to make even more penguins, fix my TODALS and do what's most important the biggest and what is least important the smallest. This shows change or growth by it helps us know what is most important so they can focus on what is most important and get their big rocks done. I am glad I chose my map.

Using your own brain is the same as using your own thinking. You would use your own brain because it can help you learn more and be smarter. You should use this at home and especially at school because then you will know that your answer for a test or something else is right because you used your own thinking. You might use your own brain when you are stuck on a hard or an easy question and many others to. You also should not look at someone else's paper because then you are cheating and you might get a lot of answers wrong so then you start to think you should have used your own brain. This impacts our learning by it makes us smarter. This is why using your own brain is important.

Working together is like a partnership because they both have almost the same meaning. It can be done wherever and whenever because you whenever you want. I think you should work together because a partnership/ working together can help you learn more by explaining why you got the answer wrong. This impacts our learning by it is making me smarter and others to. This is why working together is important to me.

Writing can be very important. Writing is important because then you can track your thinking for a test and get the right answer. You could use it for many more too. Writing also impacts your learning because it shows if you made growth or not. We should use this at home, school, and many more places as well. If we do not have writing then we would not be able to show what we do or how we do it.

Experiments can be really fun to do. Experiments can be fun when you put all of your learning into one thing. We have done a lot of experiments this year. Some experiments we have done are rocks and minerals, and when we did an experiment on the water cycle. Experiments impact our learning by showing out thinking to make us better learners. Experiments helped me with my learning.

Using technology is important. When you technology it can be used in different ways, but I think it should be used respectfully because it is used for all types of things such as cooking food and many others. This impacts our learning in school. We have a website called Study Island and it helps us with math. Without technology we would not get to study on the computers. That is why using technology is so important.

Being messy is not a good thing because you never know where anything is. Being messy impacts our learning by it makes some people focus more on the mess than what your teacher, parents or any person that is trying to talk to you. Being messy is not important because learning is more important than the mess and there are a lot of more things that are more important than being messy. I think being messy is not important to our learning.

This paragraph is going to be about my symbols on my copper hand. My words are about school. They are about school because they all have something to do with school like one of my words was to study and that has to do with school. These words have to do with STEM learning by like the 7 habits have a big thing to do with STEM learning because if you just focus on being mean to other people than getting your job done than you're not going to get a lot done. That also goes with all of the other words to because you have to live the 7 habits to do the other things to. All of my words are important to my 4th grade learning.

I think STEM is fun. I think STEM is fun because of the things we get to do like more science, art, math, and many others. STEM is cool because we get to try a lot of new things in science and all the other subjects. If we did not have STEM because I think I would be way less smarter than I am now.
